Active time
D_1
(D_1 is situated behind D_2)
t_2
Hypothetical field of 'offer wave' (='state vector') oscillations, that existed only when the 'active time' was moving between t1 and t2
Completed transaction
Retro-causal Influence?
k_1
D_2
(D_1)
k_2
No retro-causal influence?
Completed transaktion
Completed transaction
t_1
One of several paths of hypothetical hidden communication between the source and D1 and D2, preparing the transactions
